Introduction:

- The website provides a whole array of books for purchase by the user.
- A section of free public domain and other books will be available for the registered user to download and read.
- A built-in e-book reader will be provided by the website and made available to the user to read the purchased books from their profile list and the user can also read books that are already present in their system by uploading directly to the e-book interface from their computer.
- There is a user authentication system present and the user will have to register and create a free account for purchases and for using the e-book reader.
- The user may use the "Wish list" feature to add to personal archives to a list, books they wish to purchase in future.
- The website also provides a "Request Book" page where the user can submit a request to the admins for an unavailable book.

Features:

All thumbnails of available books
Separate column for free (public domain) books/ e-books
In-built e-book reader – main feature
Separated by categories
Book browsing tab
User authentication
